Section A: Answer both questions in this section

امتحان الامتحان على الرسالة فقط

## QA1

An automobile having mass  $M = 2000$  kg travels up a slope ( $\theta = 7^\circ$ ) at constant speed  $v = 100$  km/hr. If mechanical friction and wind resistance are neglected, determine the power developed by the engine ( $P_{\text{eng}}$ ) if the automobile has efficiency  $\varepsilon = 0.65$ .

Choose one of the following answers:

- a)  $P_{\text{eng}} = 122.5$  W
- b)  $P_{\text{eng}} = 202.5$  kW
- c)  $P_{\text{eng}} = 108.6$  kW
- ☒ d)  $P_{\text{eng}} = 102.2$  kW
- e) None of the above

[5 marks]

هذا الامتحان ليس  
لكن !!

$$M = \frac{m}{g}$$

Solution:

[10 marks]

$$P = Fv$$

$$F = Mg \cos \theta = 2000 \times 9.81 \times \cos 7^\circ$$

$$= 19620 \times \cos 7^\circ = 19620 \times 0.9925 = 19471 \text{ N}$$

$$P = Fv = 19471 \times 100 = 1947100 \text{ W}$$

$$F_{\text{eng}} = Mg \sin \theta = 19620 \times \sin 7^\circ = 2391 \text{ N}$$

$$P_{\text{eng}} = F_{\text{eng}} v = 2391 \times 100 = 239100 \text{ W}$$

$$v = \frac{100000}{60 \times 60} = 27.7 \text{ m/s}$$

$$F_{\text{eng}} = 19620 \text{ N}$$

How?  
for eff 0.65

# QA2

Each of the two elastic rubber bands of the slingshot has an un-stretched length  $l = 200$  mm. If they are pulled back to the position shown and released from rest, determine

- the speed of the pellet of mass  $M = 25$  g just after the rubber bands become un-stretched. Neglect the mass of the rubber bands.
- the maximum height the pellet of mass  $M = 25$  will reach if it is fired vertically upward. The band has a stiffness  $k = 50$  N/m

Given:

$$l = 200 \text{ mm}$$

$$M = 25 \text{ gm}$$

$$a = 240 \text{ mm}$$

$$b = 50 \text{ mm}$$

$$k = 50 \frac{\text{N}}{\text{m}}$$

Choose one of the following answers:

- ☒  $v = 2.86 \text{ m/s}$ ,  $h = 416 \text{ mm}$
- ☐  $v = 2.86 \text{ m/s}$ ,  $h = 416 \text{ mm}$
- ☐  $v = 2.86 \text{ m/s}$ ,  $h = 416 \text{ mm}$
- ☐  $v = 2.86 \text{ m/s}$ ,  $h = 416 \text{ mm}$
- ☐ None of the above

[5 marks]

Solution:

[10 marks]

$$M_1 v_1 + F \Delta t = M_2 v_2$$

$$F = 2T$$

X

## Section B – Answer Any 2 questions ONLY

QB1

It was observed that a tennis ball when served horizontally a distance  $h = 2.25$  m above the ground strikes the smooth ground at B a distance  $d = 6$  m away. Taking the coefficient of restitution  $e = 0.7$ , determine

- the initial velocity  $v_A$  of the ball [8 marks]
- the velocity  $v_B$  of the ball just after it rebound from the court at B. [8 marks]
- the angle ( $\theta$ ) of the ball trajectory just after it strikes the court at B. [4 marks]

6, 2.25

6.408

Solution

a)

$v_A = \sqrt{2gh}$

$\sqrt{2 \times 9.81 \times 2.25} = 6.6 \text{ m/s} \cos 20.5^\circ = 6.18 \text{ m/s}$

b)

$M_1 v_1 + M_2 v_2 = M_1 v_1' + M_2 v_2'$

$M_1 v_1 = M_1 v_1'$

$\frac{v_1' - v_1}{v_1} = 0.7$

$6.18 \times 0.7 \Rightarrow v_1' \Rightarrow v_1' = 4.32 \text{ m/s}$

What is this?

What is this?

$v_B = v_A \cos \theta$

$4.62 = 6.6 \cos \theta \Rightarrow \cos \theta$

c)

$v_B = v_A \cos \theta$

$4.62 = 6.18 \cos \theta$

$\Rightarrow \cos \theta = \frac{4.62}{6.18} = 0.7 \Rightarrow \theta = \cos^{-1} 0.7 = 45.6^\circ$

3/20

**QB2**

The billiard ball of mass  $M = 200 \text{ gm}$  is moving with a speed  $v = 2.5 \text{ m/s}$  when it strikes the side of the pool table at A with an angle, ( $\theta = 45^\circ$ ). If the coefficient of restitution between the ball and the side of the table is  $e = 0.6$ , determine

- a) the speed and angle of the ball just after striking the table at A
- b) the speed and angle of the ball just after striking the table at B

**[10 marks]****[10 marks]****Solution:**

### QB3

The Raptor is an outside loop roller coaster in which riders are belted into seats resembling ski-lift chairs. Neglecting friction:

- a) Determine the minimum speed ( $v_0$ ) at which the cars should coast down from the top of the hill, so that passengers can just make the loop without leaving contact with their seats. [6 marks]

- b) If the cars travel at  $v_0 = 4 \text{ m/s}$  when they are at the top of the hill (point A), determine their speed when they are at the top of the loop (point C) and the reaction of the passenger of mass  $M_p = 70 \text{ kg}$  on his seat at this instant. The car has a mass  $M_c = 50 \text{ kg}$ ,  $h = 12 \text{ m}$ ,  $p = 5 \text{ m}$  [14 marks]

$$F = F_N + M_p g$$

$$F_N = M_p g = 9.81 \times 120$$

$$2354.4 = M_p v^2$$

$$2354.4 = 120 v^2$$

$$v = 19.62 \text{ m/s}$$

Solution

$$M_1 v_1 + F \Delta t = M_2 v_2$$

$$T_2 + U_{12} = T_1$$

$$M_p g = M_p \sqrt{r}$$

$$g = \frac{v^2}{r}$$

$$9.81 = \frac{v^2}{r}$$

$$v = \sqrt{2gh} = \sqrt{2 \times 9.81 \times 12} = 15.34 \text{ m/s}$$

~~the speed is equal to kinetic & potential~~

(a)

$$v = \frac{1}{2} M v_0^2 + \sqrt{2gh}$$

$$= \frac{1}{2} \times (70 + 50) v^2 + \sqrt{2 \times 9.81 \times 12}$$

$$60 v^2 + 15.3 = 0$$

$$60 v^2 = 15.3 \Rightarrow v^2 = 0.255 \Rightarrow v = 0.5 \text{ m/s}$$

$$M_1 v_1 + M_2 v_2 = M_1 v_1' + M_2 v_2' + \frac{1}{2} M v^2$$

$$v_1 (M_1 + M_2) = v_1' (M_1 + M_2) + \frac{1}{2} M v^2$$

$$4(120) = v_1' (120 + 50) + \frac{1}{2} \times 120 \times \left(\frac{16}{5}\right)$$

$$480 = v_1' \left(\frac{170}{5}\right) + \frac{16}{5}$$

$$v_1' = 3.915 \times 476.8 = 120 \text{ m/s}$$

$$v_1' = 3.915 \text{ m/s}$$

$$M_1 v_1 + M_2 v_2 = M_1 v_1' + M_2 v_2'$$

$$(M_1 + M_2) v_1 = (M_1 + M_2) v_1' + \frac{1}{2} M v^2$$

$$480 = 120 v_1' + \frac{1}{2} \times 120 \times \left(\frac{16}{5}\right)$$

$$480 = 120 v_1' + \frac{16}{5}$$

$$480 = 120 v_1' + 3.2$$

$$476.8 = 120 v_1'$$

$$v_1' = 3.915 \text{ m/s}$$

$$v_1' = 3.915 \text{ m/s}$$

$$v_1' = 3.915 \text{ m/s}$$

$$v_1' = 3.915 \text{ m/s}$$

$$v^2 + 600 v - 2400 = 0$$

$$v_1' = 3.915 \text{ m/s}$$
